What

Revision

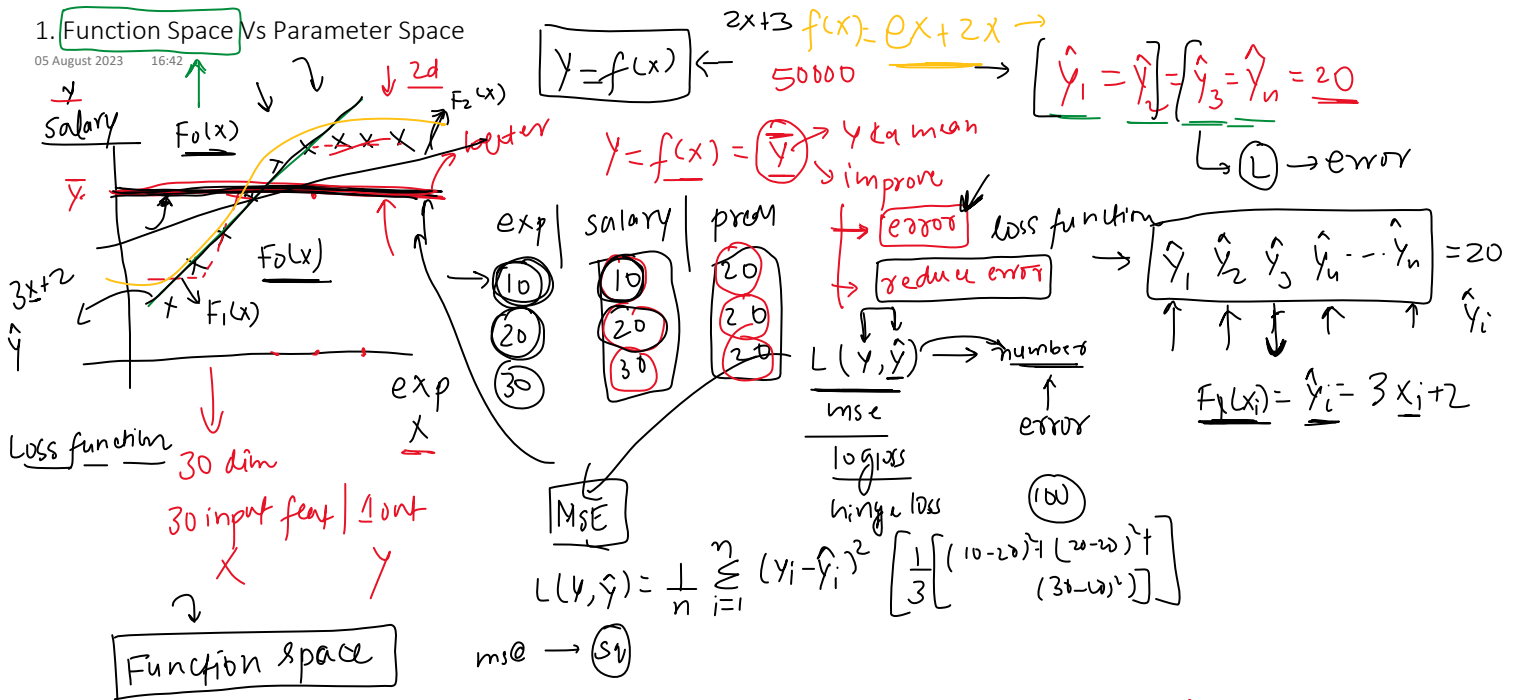

Intuition

04 August 2023 14:59

1. Function Space Vs Parameter Space

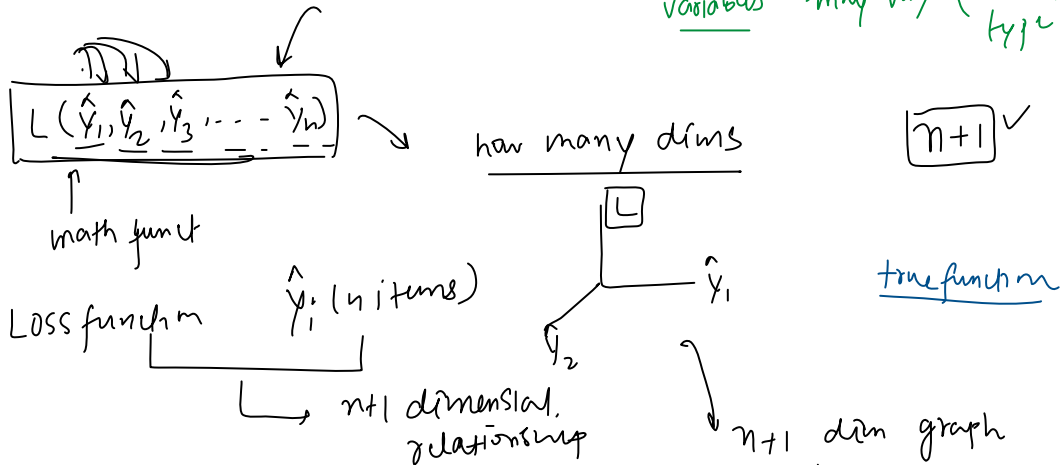

05 August 2023 16:42

$$L(y, \hat{y}) = \frac{1}{n} \sum_{i=1}^n (y_i - \hat{y}_i)^2$$

$$\Rightarrow L(y, \hat{y}) = \sum_{i=1}^n (y_i - \hat{y}_i)^2 = (y_1 - \hat{y}_1)^2 + (y_2 - \hat{y}_2)^2 + (y_3 - \hat{y}_3)^2 + \dots + (y_n - \hat{y}_n)^2$$

Variables \rightarrow may vary (model) type function

$$y = f(x) = \ln x + b = e^x$$

log x

sin x

parameter space

2. Direction of Loss Minimization

05 August 2023 17:02

$$\eta = 1 \leftarrow \sigma_i = \left[\frac{\partial L(y_i, f(x_i))}{\partial f(x_i)} \right]_{f=f_0} \quad \left[\frac{1}{2} \right]$$

$$= \frac{\partial}{\partial f(x_i)} \left[\sum_{i=1}^n (y_i - f(x_i))^2 \right]_{f=f_0}$$

$$\left[y_i - f(x_i) \right]_{f=f_0} \rightarrow y_i - f_0(x_i) \rightarrow \text{slope}$$

$$\begin{aligned} &\rightarrow y_1 - f_0(x_1) \\ &\rightarrow y_2 - f_0(x_2) \\ &\rightarrow y_n - f_0(x_n) \end{aligned}$$

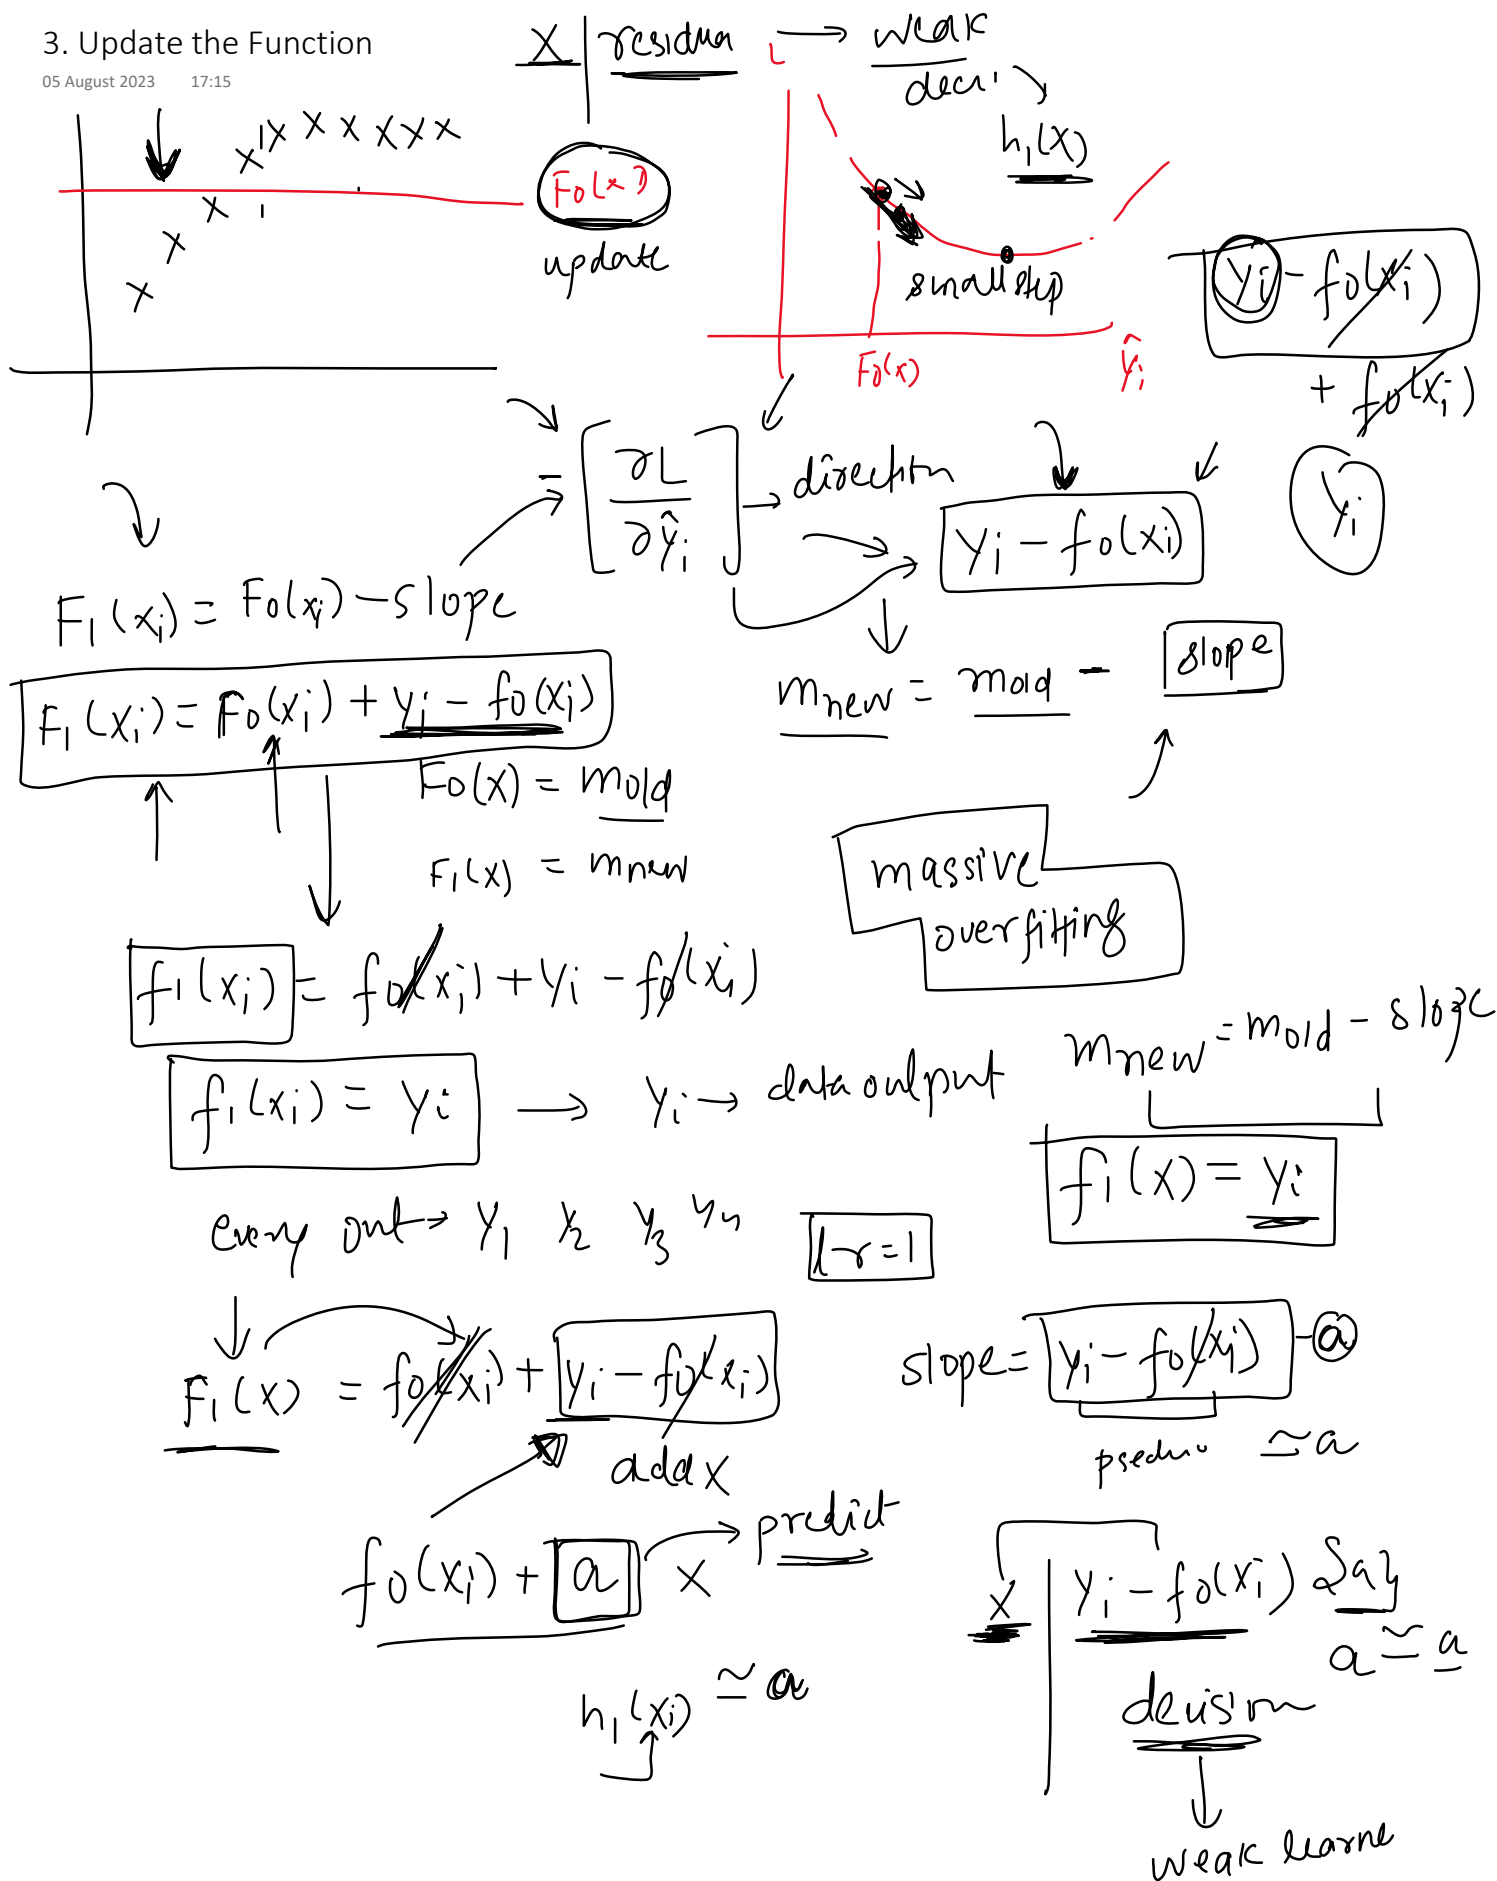

$$L \rightarrow \text{slope}$$

$$y_i - f_0(x_i) \rightarrow \text{ve}$$

3. Update the Function

05 August 2023 17:15

$$f_1(x) = f_0(x) + h_1(x)$$

$$f_1(x) = f_0(x) + h_1(x)$$

right direction

weak dt

$$\underline{x_i} \mid \underbrace{x_i - f_0(x_i)}_{\text{residual}}$$

$$f_1(x) = f_0(x) + h_1(x)$$
